### What are your main responsibilities?

- Translate security requirements into technology requirements.
- Define the maturity level of the client infrastructure, compare it with companies in the same sector, determine the next maturity level based on business requirements + ROI and TCO of this evolution.
- Provide the customer with deployment planning architectural design workshops.
- Design and validate proposed architectures against requirements and assumptions.
- Control whether proposed solutions will function according to the requirements.
- Possibility to write RFP infrastructure oriented according to the requirements defined above.
- Act as prime technical responsible in large engagements during both RFP answer and delivery phase.
- Produce and implement technical solution designs which will cover all related aspects of CyberArk Solution: from specifying the required network connectivity requirements, CyberArk installation and configuration tasks, CyberArk configuration and integration, to the on-boarding of users to the infrastructure solution and handing over the solution to In Live Operations and support.
- Work collaboratively within matrixed project teams, coordinate technical resources between different clients.
- Do presales activities like technology presentation, offer redaction and offer defence.
- Work with external suppliers to resolve issues, and ultimately be accountable for the successful technical implementation of open source projects.
- Build strong and trusted relationships with other teams, vendors and service partners.

### What do we offer you?

- A culture of continuous development. At Devoteam, we value people over processes and galvanize potential by working at the forefront of innovation.
- A challenging and variable job in an international and dynamic company. Thanks to the personal follow-up we are able to provide real career opportunities and planning.
- An attractive and competitive remuneration package with company car, group assurance and DKV.

## Soft skills required:

- Excellent communication and presentation skills
- Attention for detail and can-do attitude
- Strong and self-motivated team player
- Business attitude and solution driven
- Team-worker, but able to work independently
- Ability to handle multiple projects simultaneously
- Strong analytical skills
- Structured and methodical approach to problem solving
- Innovator by nature. Out of the box thinker
- Proactive, highly motivated with a serious work ethic and goal-oriented approach

## Hard skills required:

- In depth knowledge and implementation experience in the design, engineering and deployment of (ideally large scale) CyberArk-based Privileged Access Management solutions: CyberArk PAS Suite, CPM, PSM, AIM, CCP - PSM and CPM Connectors
- Solid MS Windows and Linux technical knowledge and operational experience: AD, IIS and Windows Security.
- Good understanding of IT networks: TCP/IP and Firewalls
- Good understanding of security concepts and technologies in the wider Identity and Access Management space: Logical Access Controls, LDAP and RBAC, Authentication solutions, PKI concepts and SIEM Solutions
- Awareness of the Information Security space and related compliance frameworks: Data Protection Act, EU GDPR, PCI-DSS and SOX
- Bachelor's in computer-science/engineering or minimum 2 years hands-on experience in infrastructure
- Experience in a multicultural environment is an advantage
- Experienced in implementing changes in complex organizations: communication and coordination skills, critical mindset, result oriented
- Proven management skills are an advantage
- Fluent in French and/or Dutch and a good command in English
