We are currently looking for a CyberArk Engineer. This is a Senior Security Engineer role in the Privileged Access Management (PAM) unit. The PAM team is responsible for a number of key security platforms and processes across the clients. The CyberArk engineer designs, implements and supports PAM security controls for her/his clients.

What are your main responsibilities?

- Lead and manage the technical implementation of security projects in the PAM domain.
- Produce and implement technical solution designs which will cover all related aspects of a PAM solution, based on CyberArk's PAS Suite. From specifying the required network connectivity requirements, S/W installation and configuration tasks, CyberArk S/W configuration and integration, to the on-boarding of users and devices to the PAM solution and handing over the solution to In Live Operations and support.
- Work collaboratively within matrixed project teams and coordinate technical resources between different clients.
- Run technical workshops and clearly communicate technical ideas and solutions.
- Build strong and trusted relationships with other teams, vendors and service partners.
- Work with external suppliers to resolve issues, and ultimately be accountable for the successful technical implementation of PAM projects.

What do we offer you?

- A culture of continuous development. At Devoteam, we value people over processes and galvanize potential by working at the forefront of innovation.
- A challenging and variable job in an international and dynamic company. Thanks to the personal follow-up we are able to provide real career opportunities and planning.
- An attractive and competitive remuneration package with company car, group assurance and DKV.

Skills required:

- In depth knowledge and implementation experience in the design, engineering and deployment of (ideally large scale) CyberArk-based PAM solutions: CyberArk PAS Suite, CPM, PSM, AIM, CCP - PSM and CPM Connectors
- Strong knowledge in CyberArk OPM/EPM
- Solid MS Windows and Linux technical knowledge and operational experience: AD, IIS, Windows Security
- Good understanding of IT networks: TCP/IP and Firewalls
- Good understanding of security concepts and technologies in the wider Identity and Access Management space (IAM): Logical Access Controls, LDAP and RBAC, Authentication solutions, PKI concepts and SIEM Solutions
- Awareness of the Information Security space and related compliance frameworks: Data Protection Act, EU GDPR, PCI-DSS and SOX
- Structured and methodical approach to problem solving.
- Innovator by nature. Out-of-the-box thinker
- Proactive, highly motivated team player with a serious work ethic and goal-oriented approach
- Attention to detail and can-do attitude.
- Excellent communication and presentation skills
- Bachelor's in computer science/engineering or minimum 2 years hands-on experience in infrastructure
- Experience in a multicultural environment is an advantage
- Proven management skills are an advantage
